Lack of coping  
capacity

7.8

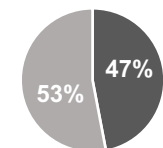

### Risk overview

The INFORM index measures Yemen's risk of crisis at 7.6, **one of the highest in the world**. The IASC declared Yemen a level 3 emergency in July 2015. You can find INFORM's profile [here](#).

## Key figures – Cholera & IDP Crisis

Suspected cases  
425,192

Female  
Gender distribution  
of cases

Male

Children cases  
44%

Elderly cases  
6%

People in  
need  
20.7m

IDPs  
1,980,510

Returnees  
946,000

Case fatality  
rate  
0.4

Attacks per  
10,000  
14.3

## Key updates

- There are currently over 20 million people in need, as well as almost 2 million IDPs across Yemen. ([UNHCR July Update](#))
- Health Cluster partners identified 14.8 million people in need of health assistance in the 2017 HNO. The main causes of avoidable deaths in Yemen are communicable diseases, maternal, perinatal and nutritional conditions (50 per cent of mortality) and non-communicable diseases (39 per cent of mortality). ([Health Cluster June Dashboard](#))
- More than 1,000,000 acutely malnourished children under the age of 5 – including almost 200,000 with severe acute malnutrition – are living in areas with high levels of infection. ([Save the Children](#))
